Please Please PLEASE--

Do not allow the very lax restriction on the terrible poison Glyphosate that is now open for public comment for only about one more hour today!

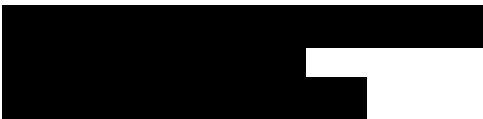

Three years ago, three members of our family were severely poisoned by an irresponsible landlord's application of Roundup in our yard when he knew we were chemically sensitive, and that we were doing yard work there. We and our doctor are still working to get that horrible stuff cleared from our bodies. As you should know, it is deliberately formulated by Monsanto to last long in the environment, and not to biodegrade.

University studies have shown that it is now the most dangerous chemical in our environment, and nearly everyone now has it in their bodies. Please put a stop to its use in California, a trailblazing state we are proud to know is setting an example for other states and nations in restriction of chemicals known to be dangerous to humans, animals, and the environment.

Please do not tamper with the EPA's restriction on the use of Glyphosate, but rather strive to get it banned forever! Your grandchildren will survive to thank you!
